for a one (1) month extension of time and appropriate fee are filed herewith. Please enter the following remarks into the record.

In the Claims:

Please amend the claims as follows:

1. (amended) A high-throughput method for determining a biochemical function of a protein or polypeptide domain of unknown three dimensional structure and function comprising:

(A) identifying a putative polypeptide domain consisting of 50 to 300 amino acids that properly folds into a stable polypeptide domain consisting of 50 to 300 amino acids;

(B) determining three dimensional structure of the stable polypeptide domain;

(C) comparing the determined three dimensional structure of the stable polypeptide domain to known three-dimensional structures in a protein data bank, wherein said comparison identifies known structures within said protein data bank that are homologous to the determined three dimensional structure; and

(D) correlating a biochemical function corresponding to the identified homologous structure to a biochemical function for the stable polypeptide domain.
